

Future applications of artificial intelligence

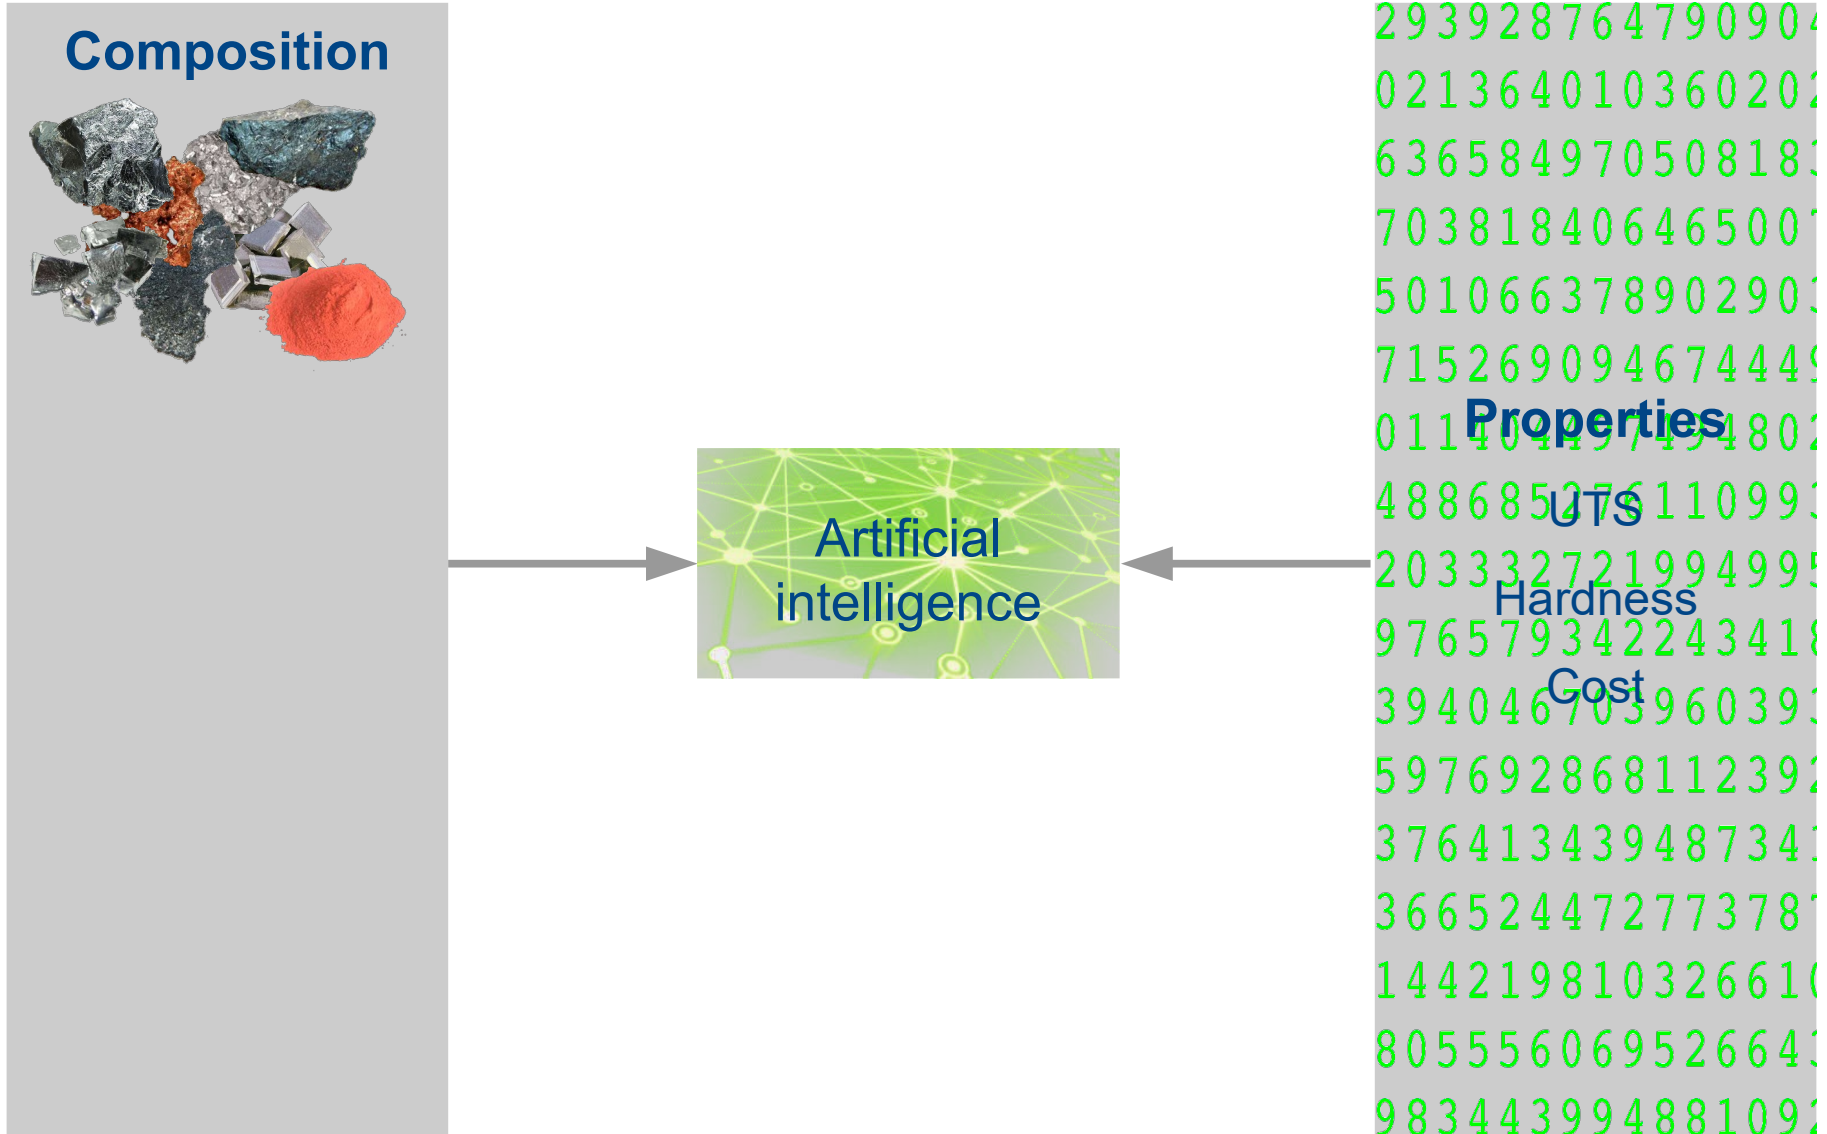

Gareth Conduit

TCM Group, Department of Physics

Neural networks for materials design

Neural networks for materials design

Neural networks for materials design

Composition

Artificial
intelligence

Properties

UTS

Hardness

Cost

Neural networks for materials design

Combine databases with neural networks

Experiment

Combine databases with neural networks

Experiment

Simulation

Combine databases with neural networks

Experiment

Combined

Simulation

Additive manufacture

3D printed alloy
for combustors
Designed from
7 data points

Additive manufacturing
from molecular dynamics
and experimental data

Merging experiment and simulations

Battery design
with DFT and
experimental data

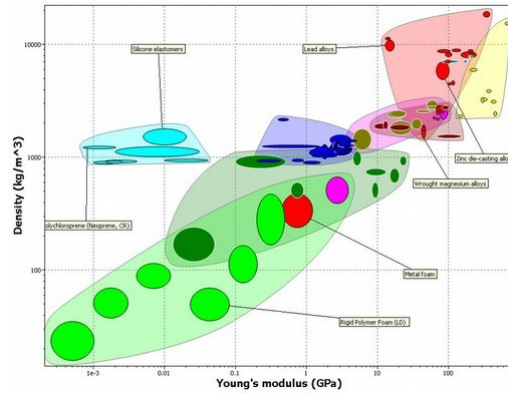

Designing lubricants
with DFT and
experimental data

Database analysis

Materials databases
Found 792 errors

GRANTA
MATERIAL INSPIRATION

Low temperature
thermometer

 **Lake Shore**
CRYOTRONICS

Going beyond materials

Increased drug data
available 200-times

Exploited data from
different fidelities of
simulations to design
new blade shapes

Summary

Used artificial intelligence to discover materials and drugs

Unique ability to study sparse, high value, big data

Merge experiments and simulations into holistic design tool

Looking for further applications of artificial intelligence
